

Risk Disclosure

OQForex | www.oqforex.com | Version 1.0

Last revised: 23 October 2026. Effective upon publication on the website.

1. Provider and purpose

ORIGIN QUANTIFICATION LIMITED, a Hong Kong company with Business Registration Number 73576284, operates the OQForex website at www.oqforex.com. Our registered office is at Workshop 60, 3/F, Block A, East Sun Industrial Centre, No. 16 Shing Yip Street, Kwun Tong, Kowloon, Hong Kong. In this document, "Company", "we", "us" and "our" refer to that company. This disclosure addresses risks that may be relevant when you use financial-market information, software, strategies or services associated with the website. Read the terms and product-specific warnings of the actual provider. This document does not establish a trading account, grant trading authority or represent that the Company holds any particular financial licence.

2. Market and leverage risks

Forex, CFDs, derivatives and other leveraged products can produce rapid and substantial losses. Leverage magnifies gains and losses; margin may need to be added at short notice and positions may be closed by the provider. Whether losses can exceed deposits depends on the product, contract, applicable law and any legally applicable negative-balance protection. Do not assume such protection applies universally. Use only funds you can afford to lose and understand the margin, liquidation and financing terms before trading.

3. Execution and liquidity

Prices can gap, spreads can widen and liquidity can disappear. Orders may be delayed, rejected, partially filled or executed at a different price. A stop-loss order does not guarantee a maximum loss unless an expressly guaranteed product applies. Trading halts, market closures and counterparty failures can prevent exit. Prices, execution quality and outcomes may vary between brokers, platforms and accounts.

4. Software, AI and automation

Expert advisers, quantitative strategies, AI models and copy-trading systems can fail because of coding errors, model assumptions, changing market conditions, poor data, incorrect settings, connectivity problems or platform restrictions. Automated systems may open repeated positions, increase exposure or continue operating unless stopped. Risk limits may not operate as expected in a fast market or outage. Monitoring and understanding permissions remain essential; do not assume the provider or software will intervene.

5. Hedging and concentration

Holding several instruments or opposing trades does not ensure effective hedging or arbitrage. Correlations can change and positions can become concentrated in the same currency, market factor or counterparty. Spreads, commissions, financing, latency and imperfect execution can remove an apparent pricing advantage. Strategies involving averaging, grids or increasing position size can accumulate losses that greatly exceed prior gains.

6. Performance information

Past returns, backtests, simulations, illustrations and testimonials do not reliably predict future results. Simulations may benefit from hindsight and may omit actual spreads, slippage, financing, taxes, rejected orders or changing liquidity. Account size, leverage, settings and execution can materially affect results. No statement of targets or historical performance is a guarantee of profit, capital protection or a maximum drawdown.

7. Providers, costs and conflicts

Confirm the actual contracting, executing and custody entities and independently check any claimed licence and permission scope. Understand all spreads, commissions, subscriptions, financing charges, currency-conversion costs and taxes. Referral fees, rebates and other remuneration can create conflicts and should be disclosed when relevant. Business registration alone does not prove financial authorisation, protection of client funds or eligibility for a compensation scheme.

8. Suitability, authority and complaints

General market content does not establish that a product or strategy suits your circumstances. Consider your knowledge, financial position, investment objectives and ability to bear losses, and seek independent advice when needed. Any discretionary trading, API or copy-trading authority requires specific separate terms, clearly defined permissions and a practical revocation route; website registration is insufficient. Risk acknowledgment does not waive the provider's legal duties or your mandatory rights. Write to ORIGIN QUANTIFICATION LIMITED, Attention: Legal and Privacy, Workshop 60, 3/F, Block A, East Sun Industrial Centre, No. 16 Shing Yip Street, Kwun Tong, Kowloon, Hong Kong. Please identify the relevant website account or transaction and the nature of your request, but do not send passwords, verification codes or unnecessary identity documents. You may also use any support channel expressly identified by us on the website or in your service correspondence.
